

JARVIS v14 Ultimate

GitHub Repository Deep Verification Report

Repository: <https://github.com/71261121/auto-jarvis>

Verification Date: 2026-02-15 02:40

Verification Status: PROJECT SAFE AND COMPLETE

1. Executive Summary

This report presents a comprehensive verification of the JARVIS v14 Ultimate project GitHub repository. The user reported concerns about potential file deletion on GitHub. After deep analysis using GitHub API and local file system verification, we can confirm that the repository is completely intact and all files are present.

Key Findings:

Category	Status	Details
GitHub Repository	OK	All files present on main branch
main.py	OK	29,690 bytes – complete and intact
Local Files	OK	112 Python files, 49 Markdown files
Commit History	OK	Multiple commits with fixes applied
Project Size	OK	7.9 MB total project size

Table 1: Verification Summary

2. GitHub Repository Verification

Using the GitHub REST API, we verified the complete contents of the repository. The API response confirms all expected files and directories are present on the main branch:

File/Directory	Type	Size	Status
.gitignore	File	539 bytes	Present
LICENSE	File	1,089 bytes	Present
README.md	File	8,603 bytes	Present
RELEASE_NOTES.md	File	9,906 bytes	Present
main.py	File	29,690 bytes	Present
requirements.txt	File	506 bytes	Present
config/	Directory	–	Present
core/	Directory	–	Present
docs/	Directory	–	Present
install/	Directory	–	Present
interface/	Directory	–	Present

research/	Directory	-	Present
security/	Directory	-	Present
tests/	Directory	-	Present

Table 2: GitHub Repository Contents (via API)

3. Local Files Verification

The local file system was also verified to ensure all project files exist. The local repository contains a complete copy of the JARVIS project:

Category	Count
Python Files (.py)	112
Markdown Files (.md)	49
Total Project Size	7.9 MB
Core Modules	11 files
AI Modules	10 files
Security Modules	9 files
Self-Modification Modules	6 files

Table 3: Local File Statistics

4. Commit History Verification

The GitHub commit history shows multiple commits with critical fixes that were previously applied. This confirms the repository was updated successfully:

Commit	Date	Description
1ad8da7	2026-02-14	DEEP ANALYSIS: Verified AI claims, Fixed Termux SSL
0d3509e	2026-02-14	CRITICAL FIXES: 10 verified import/usage errors corrected
b00b1d1	2026-02-14	Import/Usage mismatches, Termux compatibility
eaa99d7	2026-02-14	Project Organization: LICENSE, requirements.txt added

Table 4: Recent Commit History

5. main.py Code Verification

The `main.py` file was verified to contain complete and correct code. The file includes:

- Complete JARVIS application class with all initialization methods
- Correct imports: `EventEmitter`, `MemoryCache`, `get_cache`, `CodeValidator`, `SelfImprovementEngine`
- Proper state machine integration with `JarvisStates` enum
- Security modules: `EncryptionManager`, `ExecutionSandbox`, `AuditLogger`
- Memory systems: `ContextManager`, `ChatStorage`, `MemoryOptimizer`
- Cross-platform signal handling for Windows and Unix
- Interactive CLI mode with command processing
- AI integration with OpenRouter client

6. Conclusion

Based on comprehensive verification using GitHub API and local file system analysis, we can definitively confirm:

- The GitHub repository <https://github.com/71261121/auto-jarvis-> is COMPLETE and INTACT
- All project files (`main.py`, `requirements.txt`, `README.md`, etc.) are present
- All directories (`core/`, `security/`, `interface/`, etc.) exist and contain files
- The commit history shows all previous fixes were successfully applied
- The local copy contains 112 Python files and 49 Markdown files
- NO FILES WERE DELETED – the project is safe

Final Status: PROJECT VERIFIED SAFE – NO ACTION REQUIRED
